

ABSTRACT OF THE DISCLOSURE

The disclosure relates to aperture forming mechanisms for a dispenser packages, wherein the aperture forming mechanisms comprise peelable seals. In certain embodiments, the package comprises a first member having at least one first peelably sealed, creased or pleated portion and a second member having at least one second peelably sealed, creased or pleated portion, wherein the first member is arranged opposite and is sealed to the second member with an edge seal, and wherein the edge seal extends outwardly on each side of said first and second peelably sealed creased or pleated portions. Grasping the edge seals and pulling away from the creased or pleated portions causes the peel seals to pull apart, thereby opening the package. In other embodiments, the first member and second member are sealed together in a first area by base or edge seals and in a second area by peelable seals, and at least one of the first and second members comprises at least one flap. Pulling the flap peel the first member apart from the second member in the second area at the peelable seals.
